File

Worked for 22s >

Yes, I checked this video.

It is about **18.9 seconds**, and it shows the Pac-Man game running with the ghosts displaying **different colors**. That indicates your **Task 2** (`ghost_color`) change is working.

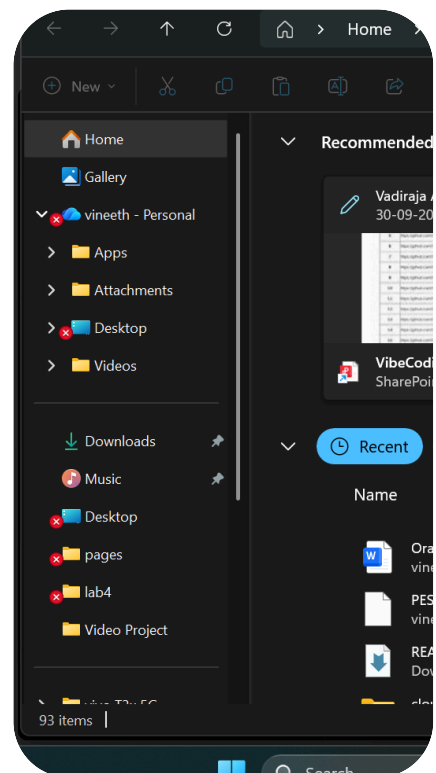

So currently:

-  Task 1 — Power pellet bug fixed
-  Task 2 — `ghost_color()` implemented and visibly working
-  Task 3 — `on_pellet_eaten()`

-  Task 4 — `bonus_life_threshold()`

If this video is your **Task 2 test video**, you can keep it as evidence, although the lab's final requirement is a **10-second after video after all tasks are completed**.

in this we want push video for it githu in file they
screenrecorded

Yes. You want to **put your screen-recorded videos inside your Pac-Man GitHub repository**, probably in a folder such as `ScreenRecord` , and then push that folder to GitHub.

1. In your `34_pacman` **project folder**

Create this structure:

```
34_pacman/  
|  
├─ game.py  
├─ README.md  
├─ ScreenRecord/  
|   ├─ before.mp4  
|   └─ after.mp4
```

Your screenshot shows your files are currently in File Explorer. You can create the ScreenRecord folder **inside the 34_pacman repository folder**, not somewhere else.

2. Put your videos there

Copy:

```
before.mp4  
after.mp4
```

into:

```
34_pacman\ScreenRecord\
```

3. Open PowerShell in 34_pacman

Then run:

```
PowerShell
```

You should see something like:

```
Untracked files:  
  ScreenRecord/
```

4. Add the videos

```
PowerShell
```

Then:

PowerShell

You should see the videos staged.

5. Commit

PowerShell

6. Push

PowerShell

Then refresh your GitHub repository. You should see:

```
ScreenRecord/  
  before.mp4  
  after.mp4
```

Check video size first

GitHub normally rejects individual files larger than **100 MB**. Check your video sizes in File Explorer.

If they are under 100 MB:

before.mp4	✓
after.mp4	✓

you can push normally.

If either is **over 100 MB**, tell me the size and I'll show you how to push it using **Git LFS**.

Also, for your lab, keeping the videos in a separate `ScreenRecord` folder is a clean way to organize the required before/after recordings. The lab specifically requires both videos as deliverables.

Sources

in file explore they not show screen recored in they doen
recored it not they

Ah, yes — I understand. **The screen recordings are not currently inside your** 34_pacman **folder.** They are somewhere else on your PC, and you want to find them first.

From your screenshot, I can see folders such as:

- Desktop
- Videos
- Downloads
- Video Project
- lab4

Do this first

1. Open Windows File Explorer.
2. Check `Videos` on the left side.

Look for files ending in:

`.mp4`

Your screen recording may be there.

If you don't find it

Use File Explorer search:

1. Click **Home** or **This PC**
2. In the top-right search box type:

`*.mp4`

3. Wait for Windows to search.

You should see your recorded video files.

Once you find the recording

Right-click the video → **Copy**.

Then go to:

```
Desktop  
→ 34_pacman
```

Create a folder:

```
ScreenRecord
```

and paste the video inside.

So finally:

```
34_pacman  
├── ScreenRecord  
│   ├── before.mp4  
│   └── after.mp4
```

Don't push anything to GitHub yet. First find where your recordings are.

If you want, **send me a screenshot after searching** *.mp4 , and I'll tell you exactly which files to copy.

now chat file we want make how make it

Yes. The lab requires **chat history exported as a PDF/doc.**

c1101291-34be-4d19-8142-c93060c...

The easiest way is to save **this ChatGPT conversation as a PDF.**

Method 1 — Browser → Save as PDF

1. Stay on this ChatGPT conversation.
2. Press:

```
Ctrl + P
```

3. The print window will open.
4. For **Printer/Destination**, select:

Save as PDF

5. Click **Save**.

6. Name it:

Chat_History_Pacman_Lab4.pdf

7. Save it somewhere easy, such as your Desktop.

Then put it in your GitHub project

Your project can look like:

```
34_pacman/  
|  
├─ game.py  
├─ README.md  
|  
├─ ScreenRecord/  
|   ├─ before.mp4  
|   └─ after.mp4  
|  
└─ ChatHistory/  
    └─ Chat_History_Pacman_Lab4.pdf
```

Then from the `34_pacman` terminal:

PowerShell

```
git add .  
git commit -m "Complete Pac-Man Lab 4"  
git push
```

Your final GitHub submission

You should have:

- ✓ Updated `game.py`
- ✓ Before 10-second video
- ✓ After 10-second video
- ✓ Chat history PDF

The lab instructions specifically require the **before/after videos, updated code, and chat history**.

c1101291-34be-4d19-8142-c93060c...

Important: Before pushing, make sure the videos are actually inside `34_pacman` ; right now we were still locating your recordings.
